

ABSTRACT OF THE DISCLOSURE

Encoded ~~animating~~ ^{moving} image data is decoded, the decoded ~~animating~~ ^{moving} image data is intraframe encoded and stored, ~~the~~ ^{and} the image which was stored and intraframe encoded is decoded and subjected to an arbitrary edition, ~~and the~~ ^{the} edited frame image is encoded by an ~~animating~~ ^{moving} image encoding system, thereby reducing a memory capacity when ~~an animating~~ ^{a moving} image edition is performed and realizing a high processing speed.
